Exam.	Back		
Level	BE	Full Marks	80
Programme	BCT	Pass Marks	32
Year / Part	IV / I	Time	3 hrs.

Subject: - Computer Network *(CT 702)*

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ *Attempt **All** questions.*
- ✓ *The figures in the margin indicate **Full Marks**.*
- ✓ *Assume suitable data if necessary.*

1. Explain briefly the architecture for client-server network model with example. What do you mean by protocol hierarchies and how is "header and trailer addition" done? [3+5]
2. What are the factors to be considered while selecting media? Compare different types of guided transmission media with appropriate figures. [2+6]
3. What are the services provided by data link layer? Explain CRC with an example. [2+6]
4. Define routing. Why do we use dynamic routing? Explain the operation of link state routing protocol. [1+2+5]
5. How can you dedicate 5, 60, 115, 12 and 14 IP address to the five departments from the pool of class C IP address 192.168.10.0/24 with minimum loss? [8]
6. What are the functions of Transport layer? Explain the TCP segment format in detail. [3+5]
7. What is function of proxy server? Explain the working of FTP in detail. [2+6]
8. Distinguish between IPV6 and IPV4 packet routing. Explain about Dual stack and translation in IPv6. [2+6]
9. What is cryptography? Differentiate between DES and AES. Explain AES with an example. [1+2+5]
10. Write short notes on: (Any Two) [2×4]
    a) ATM Architecture
    b) DHCP
    c) Open and closed loop congestion control

Exam.	Regular		
Level	BE	Full Marks	80
Programme	BCT	Pass Marks	32
Year / Part	IV / I	Time	3 hrs.

Subject: - Computer Network *(CT 702)*

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ *Attempt **All** questions.*
- ✓ *The figures in the margin indicate **Full Marks**.*
- ✓ *Assume suitable data if necessary.*

1. How does the client-server model work? Differentiate it with peer-to-peer network with advantages and disadvantages. [3+5]
2. Define Throughput. A network with bandwidth of 20 Mbps can pass only an average of 18,000 frames per minute with each frame carrying an average of 20,000 bits. Calculate the throughput of this network. Differentiate between Packet switching and Virtual Circuit switching. [1+3+4]
3. Explain Go-back-N ARQ and selective Repeat ARQ with example. How carrier sense multiple access with collision detection (CSMA/CD) is better than CSMA? [4+4]
4. Consider IP block of 202.50.0.0/24 and six departments with 125, 59, 27, 14, 4 and 2 hosts respectively. Perform the subnetting so that wastage of IP addresses is minimum and find out the subnet mask, network address, broadcast address, wasted IP addresses and usable host ranges in each network. [8]
5. Define routing algorithm. List out the properties/goals of routing algorithm. What is link state routing algorithm? Show how routing tables is populated in LSR with example. [3+5]
6. What are services provided by Transport layer? Explain about Leaky-Bucket algorithm for congestion control? [3+5]
7. What are resource records in DNS? Explain the types of DNS queries with example. [3+5]
8. List advantages of IPv6 over IPv4. Explain any two suitable transition strategies for IPv4 to IPv6. [2+6]
9. Write down the steps involved in RSA encryption algorithm. Encrypt the word "Computer" using RSA algorithm. [8]
10. Write short notes on: (Any Two) [2×4]
    a) Frame relay
    b) TCP sliding window
    c) HDLC

Exam.	Regular		
Level	BE	Full Marks	80
Programme	BCT	Pass Marks	32
Year / Part	IV / I	Time	3 hrs.

Subject: - Computer Network *(CT 702)*

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ *Attempt **All** questions.*
- ✓ *The figures in the margin indicate **Full Marks**.*
- ✓ *Assume suitable data if necessary.*

1. What is protocol? What are the reasons for using layered network architecture? Compare OSI with TCP/IP reference model. [1+2+5]
2. What is transmission medium? Explain different transmission medium with their merits and demerits. [1+7]
3. What is collision? How is it occured? How the possibility of collision is reduced in IEEE 802.3 and IEEE 802.11? Explain. [1+1+6]
4. Suppose your company has leased the IP address of 222.70.94.0/24 from your ISP. Divide it far five different departments containing 50, 30, 25, 12, 10 no of hosts. There are also two points to point links far interconnection between routers. List out the network address, broadcast address, usable IP address range and subnet mask for each subnet. Also mention the unused range of IP addresses. [8]
5. What is the purpose of Time to live (TTL) and protocol field in header of IPv4 datagram. Which protocol is used in internet layer to provide feedback to hosts/routers about the problems in the network environment? What is ARP and how does it work? [4+1+3]
6. What are the major task of transport layer? Explain. What is token bucket algorithm? [5+3]
7. What is DNS? Explain the working principle of DNS with a proper diagram. Compare IMAP and POP3 protocols. [1+4+3]
8. "IPv4 and IPv6 coexistence" what does this mean? Explain Dual stack approach with an appropriate figure. [3+5]
9. How does a Digital Signature work? Encrypt the world HELLO using RSA algorithm. Also decrypt it by showing steps. [2+6]
10. Explain briefly the desirable properties of secure communication. Explain how packet filtering firewall works. [4+4]

Exam.	Back		
Level	BE	Full Marks	80
Programme	BCT	Pass Marks	32
Year / Part	IV / I	Time	3 hrs.

Subject: - Computer Network *(CT 702)*

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ *Attempt <u>All</u> questions.*
- ✓ *The figures in the margin indicate <u>Full Marks</u>.*
- ✓ *Assume suitable data if necessary.*

1. What are the features of Client/Server Architecture? What are headers and trailers and how do they get added and removed? [4+4]
2. Why the telephone companies developed ISDN? Explain the working principle of ISDN with its interface and functional group. [2+6]
3. Explain the working principle of CSMA/CD with appropriate figure. [8]
4. Institute of Engineering has six departments having 16, 32, 61, 8, 6 and 24 computers. Use 192.168.1.0/24 to distribute the network. Find the network address, broadcast address, usable IP range and subnet mask in each department. [8]
5. What is routing? Differentiate between distance vector and link state routing algorithms. [2+6]
6. Explain the TCP segment structure. Why TCP is known as reliable protocol and also describe how reliability is provided by TCP? [4+4]
7. What is TFTP? Explain working principle of FTP with data transfer process including proper port connection. Use proper diagram to justify your answer. [2+6]
8. List the advantages of IPv6 over IPv4. Explain any two transition strategies for IPv4 to IPv6. [2+6]
9. List the properties of secure communication. Encrypt and decrypt "ROSE" using RSA algorithm. [2+6]
10. Write short notes on: (Any two) [4+4]
    a) Firewall and their types
    b) 803 Token Bus
    c) Virtual circuit switching

Exam.	Regular / Back		
Level	BE	Full Marks	80
Programme	BCT	Pass Marks	32
Year / Part	IV / I	Time	3 hrs.

Subject: - Computer Network *(CT 702)*

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ *Attempt **All** questions.*
- ✓ *The figures in the margin indicate **Full Marks**.*
- ✓ *Assume suitable data if necessary.*

1. Draw the architecture for Client/Server network model. Explain in details about P2P network model with supportive examples. [2+6]
2. What is switching? What are the various switching techniques? Elaborate packet switching with a proper diagram. [1+2+5]
3. What are multiple access protocols? Describe the various framing techniques at data link layer. [2+6]
4. Suppose you are a private consultant hired by the large company to setup the network for their enterprise and you are given a large number of consecutive. IP address starting at 120.89.96.0/19. Suppose that four departments A, B, C and D request 100, 500, 800 and 400 addresses respectively, how the subnetting can be performed so, that address wastage will be minimum? [8]
5. What do you mean by autonomous system? Explain how routing loops are prevented in Distance Vector Routing with examples. [2+6]
6. Explain connection establishment and termination in TCP. Explain briefly about Leaky-Bucket algorithm for congestion control? [4+4]
7. Why we need proxy servers? What are the importance of DNS and HTTP(S) while you are browsing any website? [2+6]
8. "IPv4 and IPv6 coexistence" what does this mean? Explain what you mean by address family translation in IPv4/IPv6 migration process with an appropriate figure. [3+5]
9. Explain briefly the desirable properties of secure communication. Explain how Packet filtering firewall Works. [4+4]
10. Write short notes on: (Any two) [4+4]
    a) Digital Signature
    b) VPN
    c) Symmetric key cryptography

Subject: - Computer Network *(CT702)*

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ *Attempt **All** questions.*
- ✓ *The figures in the margin indicate **Full Marks**.*
- ✓ *Assume suitable data if necessary.*

1. Why layering is important? Explain design issues for layers in detail. Mention service primitives for implementing connection oriented service. [2+4+2]
2. Compare circuit switching and packet switching. Explain ISDN channels with architecture. [3+5]
3. State the various design issues for the data link layer. What is piggybacking? A bit string 01111011111101111110 needs to be transmitted at the data link layer. What is the string actually transmitted after bit stuffing? [3+3+2]
4. Why routing is essential in computer networking? Compare working of distance vector routing algorithm with link state routing algorithm. [3+5]
5. Design a network for 5 departments containing 29, 14, 15, 23 and 5 computers. Take a network example IP 202.83.54.91/25. [8]
6. What are the differences between TCP and UDP services? Explain the TCP datagram format in detail. [3+5]
7. Define socket programming. How web server communication and file server communication are possible in network. Explain with used protocols. [6+2]
8. What are the methods used to interoperate IPv6 and IPv4. Show IPv6 datagram format. [6+2]
9. What is VPN? Encrypt a message "network" using RSA algorithm. [2+6]
10. Write short notes on: (any two) [4+4]
    i) Flow control in D22
    ii) X.25
    iii) ALOHA

Subject: - Computer Network *(CT702)*

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ *Attempt **All** questions.*
- ✓ *The figures in the margin indicate **Full Marks**.*
- ✓ *Assume suitable data if necessary.*

1. Compare OSI layer with TCP/IP Layer? Explain in which level of OSI layer following tasks are done. [5+3]

   i) Error detection and correction
   ii) Encryption and Decryption of data
   iii) Logical identification of computer
   iv) Point-to-point connection of socket
   v) Dialogue control
   vi) Physical identification of computer

2. Explain five instances of how networks are a part of your life today. Through we have MAC address, why do we use IP address to represent the host in networks? Explain your answer. [5+3]

3. Briefly explain different types of Data Link Layer framing mechanisms. List the features of FDDI. [8]

4. Explain how can you allocate 30, 24, 25 and 20 IP addresses to the four different department of ABC company with minimum wastage. Specify the range of IP addresses, Broadcast Address, Network Address and Subnet mask for each department form the given address pool 202.77.19.0/24. [8]

5. What is routed and routing protocol? Give examples. Explain Token Bucket algorithm. [4+4]

6. For the client-server application over TCP, why must the server program be executed before the client program? TCP is known as reliable process how, describe reliability is provided by TCP. [3+5]

7. Compare the header fields of IPV6 and IPV4. Which method do you suggest for the migration of IPv6 and why? [4+4]

8. Explain briefly how firewalls protect network and also explain different types of Firewall. Illustrate your answer with appropriate figures. [8]

9. Write down the steps involved in RSA encryption algorithm. Encrypt the word CAT using RSA algorithm, choose the suitable data for encryption by yourself according to RSA algorithm. [8]

10. Write short notes on: [4×2]

    a) Simple Mail Transfer Protocol
    b) Doman Name Server

1. Explain the need of Networking Software in the form of Hierarchy? Mention in which level layer of OSI reference model following tasks are done. [6+2]
   i) Timing and voltage of received signal
   ii) Encryption and decryption of data
   iii) Data framing
   iv) Point-to-point connection of socket.
2. Define switching and multiplexing. Differentiate between circuit switching and packet switching. [4+4]
3. Explain different types of Data link layer framing mechanisms. [8]
4. What is the contribution of sub-netting in IP address management? Show the importance in this case. Banijya bank need to allocate 15 IPs in HR department, 30 in finance department, 24 in customer care unit and 25 in ATM machines. If you have one network of class C range public IP address. Describe how you will manage it. [8]
5. Why is routing protocol necessary? Explain the working process of Routing Information protocol (RIP) with example. [3+5]
6. Why do you think that there exist two protocols in transport layer where as there exists only one protocol in Internet layer in TCP/IP reference model. Explain token bucket algorithm for congestion control. [5+3]
7. What is HTTP protocol? With an example explain how a request initiated by a HTTP client is served by a HTTP server. [2+6]
8. Explain the IPv6 datagram format and the function of each field with necessary figure. [8]
9. Compare symmetric key encryption method with asymmetric key encryption. Describe the operation of RSA algorithm. [4+4]
10. What is network security? How can firewalls enhance network security? Explain how firewalls can protect a system. [2+2+4]

2068 Chaitra

Exam.	Regular / Back		
Level	BE	Full Marks	80
Programme	BCT	Pass Marks	32
Year / Part	IV / I	Time	3 hrs.

Subject: - Computer Network

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ *Attempt **All** questions.*
- ✓ *The figures in the margin indicate **Full Marks**.*
- ✓ *Assume suitable data if necessary.*

1. Why are the network softwares defined with distinct layers stacked on top of one another? What are the factors to be considered when designing these layers? [2+6]
2. Why do we need RAID in the computer networks? Define and discuss the differences between RAID 0, RAID 1 and RAID 5. [2+6]
3. What is a telephone? With a simple diagram of a telephone network explain how the system works. [2+6]
4. Why channel access mechanism is important in computer networking? Explain the operation of IEEE 802.5 with its frame format. [3+7]
5. Differentiate: [2×5]
   a) Distance vector and link state routing algorithm
   b) Circuit switching and packet switching
6. What is X.25? Explain the format of X.25 packet in detail. [3+5]
7. What are the differences between TCP and UDP services? Explain the TCP datagram format in detail. [3+5]
8. Suppose there are 4 departments A, B, C and D. The department A has 23 hosts, B has 16, C has 28 and D has 13 hosts. You are given a networks 202.70.64.0/24. Perform the subnetting in such a way that the IP address wastage in each department are minimum and also find out the sunbet mask, network address, broadcast, and unable host range in each department. [10]
9. Write short notes on: [2×5]
   a) Network Security
   b) Router and Gateway

Year / Part	IV / I	Time	3 hrs.

Subject: - Computer Network

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ *Attempt **All** questions.*
- ✓ *The figures in the margin indicate **Full Marks**.*
- ✓ *Assume suitable data if necessary.*

1. What is a switching? Differentiate between packet switching and circuit switching. [2+6]
2. What are types of twisted pair cable? Calculate the efficiency of slotted Aloha. [4+4]
3. What is a virtual LAN? Design a network which consists of two VLAN named student and department. Explain with necessary diagram, IP addresses and configurations. [2+6
4. What is a logical address? You are given the IP address block 200.10.80.32/25. If there are five departments which require 5, 40, 28, 12, 6 hosts respectively. Design the subnet. [2+6]
5. What are the functions of transport layer? Draw the segment structure of TCP. [3+5]
6. What is a fragmentation and re-assembly? Explain about any intra-AS routing protocol. [3+5]
7. What are the advantages of IPV6? The maximum payload segment is 65495 byte. Why was such strange number chosen? [4+4]
8. What is the function of proxy server? Explain about electronic mail. [3+5]
9. What is a secure socket layer? Encrypt the message "DANGER" using RSA algorithm. [2+6]
10. Compare x.25 and frame relay network. A bit string 01111011111101111110 needs to be transmitted at the data link layer. What is the string actually transmitted after bit stuffing? [6+2]

Subject: - Computer Networks

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ *Attempt **All** questions.*
- ✓ *The figures in the margin indicate **Full Marks**.*
- ✓ *Assume suitable data if necessary.*

1. Why network software should be in hierarchical form? Explain in detail about OSI layer. [3+5]
2. If you are assigned to design a LAN for Pulchowk Campus having 5 departments. Each department will have 100 computers locating in 5 rooms each equipped with 20 computers. Make your own justification while selecting connecting devices and accessories. [6+2]
3. What do you mean by ISDN and what is it contribution in the field of data communication? Explain various types of multiplexing mechanism used in communication. [3+5]
4. Describe what do you understand by switching along with various types of switching mechanism. Explain the fault tolerance mechanism of FDDI. [4+4]
5. Why access control of channel is essential? Compare operating details of IEEE 802.4 and IEEE 802.5. [2+6]
6. Explain along with the packet format about the virtual circuit connection of X.25. [4+4]
7. Why routing is essential in computer networking? Compare working of distance vector routing algorithm with link state routing algorithm. [2+6]
8. Explain in detail about IP frame format. [8]
9. If you need to assign IP addresses to all computers of question no. 2 making each department as network. What will be your approach? Explain with IP address ranges you are suggesting. [8]
10. How the protocol SMTP does operate? Explain the procedures to make your network secured. [3+5]

Exam.	Regular / Back		
Level	BE	Full Marks	80
Programme	BCT	Pass Marks	32
Year / Part	IV / I	Time	3 hrs.

Subject: - Computer Network

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ *Attempt All questions.*
- ✓ *The figures in the margin indicate Full Marks.*
- ✓ *Assume suitable data if necessary.*

1. a) Why do communication process within computer network is divided into layers? How the process of data encapsulation occurs in transmission mode described by seven layers of OSI model. Compare OSI model with TCP/IP model. [2+2+4]
   b) What is client/server networking? Explain Active Networking model framework comparing with traditional legacy network. [3+5]
2. a) What are the services provided by data link layer? Explain any one methods of framing and flow control. [2+3+3]
   b) Calculate SNR and maximum channel capacity of a cat6 channel having bandwidth 300 MHz with 2mW and 200 μW as signal and noise power respectively. [4+4]
3. a) Describe the 802.3 Ethernet standard for CSMA/CD and compare it with 802.4 token bus technology. Explain how DSSS technique is applied in wireless transmission. [5+3]
   b) Differentiate between circuit switching and packet switching technology. Explain the operation how switched virtual circuit in frame relay network is established, maintained and teardown. [2+6]
4. a) What is unicast and multicast routing? Describe the concept of optimality principle. Describe how the routers in its link state routing come into fully adjacency state. [2+6]
   b) What are the factors that cause congestion within WAN? Propose your best traffic shaping approach to manage congestion in packet switched network. [2+6]
5. a) Give the reason why the current world is moving to IPv6 addressing mechanism. Describe the IPv6 address types with its representation format. You are given the IPv4 address block 203.71.53.0/26; assign the IP subnet for the following network. [2+2+6]

   b) Write short notes on (any two) [3+3]
      i) TCP Sliding Window Protocol
      ii) Secrete Key Algorithm: DES
      iii) ISDN Signaling and ATM AAL
      iv) ICMP Message Types

Subject: - Computer Network

- ✓ Candidates are required to give their answers in their own words as far as practicable.
- ✓ *Attempt **All** questions.*
- ✓ *The figures in the margin indicate **Full Marks**.*
- ✓ *Assume suitable data if necessary.*

1. Define network and protocol for network. Explain peer-to-peer network process with example. [2+6]
2. Describe guided and unguided media used in computer network with their advantages. [8]
3. Explain the operation of pure ALOHA system. How CSMA/CD works? [4+4]
4. List the functions of Data Link Control Layer. Explain any two sliding window protocols with the advantages of piggybacking. [5+3]
5. Describe the policies that help in preventing the congestions within the network? Differentiate between leaky bucket and token bucket algorithm with their operation and working of token bucket. [4+6]
6. What do you understand by virtual circuit switching? Explain the X.25 virtual circuit switching. [2+6]
7. Explain the seven layers of OSI model with their example protocols. [8]
8. Briefly describe ICMP error and informational message types in IPv4 network infrastructure. [8]
9. How can we maintain the security within the communication network? Explain any one cryptography algorithm with example. [2+6]
10. Write short notes on (any two): [3+3]
    a) UDP and its application
    b) Network Devices: Hubs, Switches and Routers
    c) IPv4 Header Structure
